

1 Abstract of the Disclosure

2 A method and apparatus for processing web documents, according to which a
3 plurality of web documents are multi-browsed by managing the documents in an
4 incorporated way, are provided. The web document processing method for
5 incorporating and browsing a plurality of web documents at a terminal connected to a
6 server through a network includes the steps of: obtaining web documents including
7 at least a primary document; obtaining one or more secondary web documents
8 specified in the primary document; storing data of the secondary web documents in
9 corresponding predetermined storing portions; displaying document selectors
10 associated with the secondary web documents on a screen of the terminal; and
11 upon selecting one of the document selectors, displaying a secondary web
12 document corresponding to a selected document selector on the screen of the
13 terminal. Accordingly, the web processing method and apparatus enable users to
14 view a plurality of documents or search results without moving from one web page to
15 another, thereby saving surfing time on the Internet and increasing effective use of
16 the Internet.
